                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          diagnosis
```

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases such as wiral, bacterial, fungal and parasitic infections diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.Wipo.int/pub/published_pot_sequences. Example 2; SEQ ID NO 3112; 781pp + Sequence Listing; English.

```
The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid: stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operative tissue repair, and ulcers; stimulates angiogenesis
Isolated nucleic acid molecules encoding musculoskeletal system associated polypeptides, useful for detecting disorders, e.g. cancer

conditions, such as, Alzheimer's disease, barkinson's disease, and Alzheimer's disease, parkinson's disease, and Alzheimer's stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or bone grafts; prevents skin aging due to sumburn by stimulating keratinocyte growth, prevents hair loss, since FGF family stimulating keratinocyte growth, prevents hair loss, since FGF family stimulating keratinocyte growth, prevents skin aging due to sumburn by stimulates activate hair-forming cells and promotes melanocyte growth, stimulates growth and differentiation of hematopoietic cells and bone marrow cells when used in combination with other cytokines; maintains crygans before transplantation or for supporting cell culture of primary tissues; induces tissue of mesodermal origin to differentiate in early embryons; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates mammalian characteristics, such as, body height, weight, hair colour, eye colour, skin, percentage of adipose tissue, pigmentation, size, and shape colour, skin, percentage of adipose tissue, pigmentation, size, and shape colour, smill seate or physical state by influencing biorhythms, caricadic rhythms, depression, tenderny for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, late content, lipid, protenn, carbohydrate, vitamins, minerals, capabilities, metal state matalisms, minerals, coloured mannal state matalianal acceptage capabilities, or other mutritional components. This sequence encodes a novel human mutritional components. This sequence encodes a novel human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1784

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   09
                                      critical cashociation was no longer observed. A single macarization disease. This comprises a G to A substitution that is present in disease. This comprises a G to A substitution that is present in disease. This comprises a G to A substitution that is present in the end affected chromosomes.

It results in a Cys to Tyr substitution in the encoded protein (see AAW36499) at a critical disulphide bridge important for secondary is tructure. The following are claimed: the Hi genomic DNA [1], a 1437 bp cDNA sequence (Ia) (see AAY36691) and their 24d1, 24d2 and 24d7, variants; a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants contained product chosen from the HH gene product, its variants contained by the presence or a peptide of at least 56 amino acid residues of these; an antibody produced using the peptide; a method for che common HH gene containing nor minal model for the HH disease; metal chelation agents, T-call differentiation factors and therapeutic agents for the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or the mitigation of injury due to oxidative process in vivo or criticense oligonucleotide directed against a transcriptional correction or pairs of oligonucleotide directed against a transcriptional correction mit directed against a range of nucleotides from the HH gene. The invention also relates to methods for greening the HH gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5786 GCTGGATAACCTTGGCTGTACCCCCTGGGGAAGAGCAGAGATATACGTGCCAGGTGGAGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            5666 egecerrenacracrececedancarcaceargangreserrenggarangedaceda

products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis gene. The present sequence represents a hereditary haemochromatosis subregion from an individual unferced by hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary haemochromatosis (HFE) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the EDNA or RNA from the presence of a haplotype or genotype where the presence of the HFE gene mutation in the genome of the individual. The HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BTF genes, which are homologues of the milk protectin butyrophilin (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a RORET gene which can be used to develop products for the study, diagnosis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

                                                                                                                              The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     5666 GGGCCTTGAACTACTACCCCCAGAACATCACCATGAAGTGGCTGAAGGATAAGCAGCCAA

                                                                                                                                                                                                                               The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

method to determine the presence or absence of the common hereditary haemochromatosis (HFB) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of a haplotype or genotype where the presence of the haplotype genotype indicates the likely presence of the HFB gene mutation in the genome of the individual. The HFB gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFB. The present invention also describes BFF genes, which are homologues of the milk protein buttyrophilin (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a RORE gene and antagonists of develop products for the study, diagnosis and treatment of lupus and Siogran's syndrome, and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   41496 TGCCTCCTTTGGTGAAGGTGACACATCATGTGACCTCTTTCAGTGACCACTCTACGGTGTC 41437
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             41436 GGGCCTTGAACTACTACCCCAGAACATCACCATGAAGTGGCTGAAGGATAAGCAGCCAA 41377

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to hereditary hemochromatosis gene products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

products. These proteins may be used to treat a patient diagnosed as having human hemochromatosis disease. It is also useful as a metal chelation agent or as a T-cell differentiation factor, and for alleviating iron overload. They may also be used in protein replacement therapy for individuals having a defective human hemochromatosis gene.

```
to encapsulate the mucleic acid, multiplying the cell to propagate the mucleic acid, inducing cell death without affecting the mucleic acid, and achieving a desired stability of the cell membrane for substantially matching the mucleic acid with the membrane stability of test cells. The reference nucleic acids are useful for molecular diagnosis and genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        iron absorption regulator; intracellular iron absorption; lung injury; haemochromatobis; transfusion; thalassaemia; haemolytic anaemia; chronic infection; transferrin receptor; TfR; brain tumour; cancer; oxidative stress disorder; tissue damage; vascular disease; inflammation; atherosclerosis; autoimmune disease;

1193

This cDNA clone, designated cDNA24, is derived from human gene whose mutated form is associated with hereditary haemochromatosis whose mutated form is associated with hereditary haemochromatosis (HH). It was obtained from a directionally cloned plasmid-based cDNA library following identification of the HH locus in the HLA region of chromosome . A single mutation (24d1) in the HH gene age to A substitution that majority of HH disease. This comprises a G to A substitution in the encoded protein (see AAM3649) at a chromosomes and in 4% of unaffected chromosomes. It results in a chromosomes and in 4% of unaffected chromosomes. It results in a chromosome and in 4% of unaffected chromosomes. It results in a chromosome and in 4% of unaffected chromosomes. It results in a chromosome and in 4% of unaffected chromosomes. It results in a critical disulphide bridge important for secondary structure. The critical disulphide bridge important for secondary structure. The collowing are claimed: a low sequence (I) (see AAT96690), the 1437 bp cDNA sequence (I) and their z4d1, z4d2 and 24d7 variants; a cloning or expression vector; host cells; a peptide product chosen from the HH gene product, its variants ceptide product chosen from the HH gene product of the common HH gene condensing the peptide; a method condetermine the presence or absence of the common HH gene mutation; an animal model for the HH disease; metal of agents for the mitigation of injury due to oxidative process in vivo or mitigation of iron overload; a method for screening potential Hereditary haemochromatosis gene and variants - useful for diagnosis and treatment of hereditary haemochromatosis disease i G to A substitution (24d1 mutation associated with HH), results in Cys to Tyr substitution" g "C to G substitution (24d2 mutation) results in His to Asp substitution" h "A to T substitution (24d7 variant) results in Ser to Cys substitution" Hereditary haemochromatosis; metal toxicity; diagnosis; Drayna DT, Feder JN, Gnirke A, Ruddy D, Thomas WJ; Tsuchihashi Z, Wolff RK; Hereditary haemochromatosis gene cDNA clone gene therapy; prenatal screening; human; ss Location/Qualifiers 222.1268 Disclosure, Fig 4; 115pp; English. microglobulin (beta2m)/HFE monochain comprising human beta2m (or its

microglobulin (beta2m)/HFE monochain comprising human beta2m (or its

malogue or active fragment). Linked to alphal-alphal domains of human

HFE (a central regulator of iron absorption; undefined) or its analogue

or active fragment, by a flexible linker peptide, or a functional

ederivative or salt of (I). (I) is useful for reducing intracellular iron

absorption in patients having hereditary haemochromatosis, transfusions,

thalassaemias, haemolytic anaemia or chronic infections, and for

chain barrier. (I) is further useful for treating transfersin receptor

(TfR) which are preferably lymphocytes or leukocytes, across the blood
con an interpretating oxidative stress disorders resulting in

tissue damage e.g. vascular diseases, inflammation, atherosclerosis,

cutsimmune diseases and inflammatory of therapeutic use for cancer,

autoimmune diseases and inflammatory conditions. The monochain manifests

specific characteristics advantageous for drug delivery systems. It is a

specific characteristics advantageous for drug delivery systems. It is a

continuing efficiant drug delivery of therapeutic use for cancer,

cutoimmune diseases and inflammatory conditions. The monochain manifests

coluble, stable and fully conformed protein. It binds specifically or

cransferrin receptor (TfR) and therefore targets cells that over-express

this receptor. It is continuously internalised by the target cells, thus

cells, minimising side effects It negatively regulates iron absorption,

reducing growth of undesired cells and preventing lymphocyte activation.

cells, minimising side effects It negatively regulates iron absorption,

reducing yrowth of undesired cells and preventing lymphocyte activation.

cells, minimising is expected to overcome drug-resistance since it is a self non-polymeric protein and delivery of

charges via monochain is expected to overcome drug-resistance it is a self non-Soluble beta 2 microglobulin/HFE monochain useful for treating iron-overload conditions e.g. thalassemia and chronic infections, comprises human beta 2 microglobulin linked to alpha domains of HFE by ACCCAGGCCTGGATCAGCCCCTCATTGTGATCTGGGG 1229 coding sequence of beta2m/HFE monochain.

```
therapeutic agents for activity in connection with HH disease, an antisense oligonucleotide directed against a transcriptional product of a nucleic acid sequence as above, and oligonucleotides CC or pairs of oligonucleotides covering a range of nucleotides from CC (I), (Ia) or their variants, useful for detecting a polymorphism in CC the HH gene. The invention also relates to methods for screening CC diagnosis, and therapies of HH disease, including gene therapy, CC diagnosis, and antibody-based therapeutics, and small molecule CC therapeutics.
